

The Breakthrough of the 21st Century

After 14 years of dedicated research, our team of scientists has developed a revolutionary product: **NUKI – The Law Breaker**.

What is NUKI?

NUKI is a cutting-edge device that taps into the passive energy surrounding us and converts it into usable power. It operates without relying on traditional power sources, breaking the conventional boundaries of science. Available in Two Models:

1. NUKI for Electric Vehicles (EVs)

A comparatively small, easy-to-install device that automatically charges itself eliminating the necessity of huge battery bank, enabling longer drives without the need for frequent charging stops. Nuki for EV will be made available in the voltages of **48V, 60V, 72V, 96V & 144V** and at an amperage of 110A. In some special cases, the voltage & amperage can be customized according to the manufacturers' need.

2. NUKI for Inverters/UPS & Cell Phone Towers

Connect NUKI to your inverter or UPS in place of your regular battery, and it will keep your system charged without drawing from the grid, providing continuous power for the lifetime. Mimanso plans to manufacture and sell the following models of Nuki in the first phase

- 48 Volts – 5 KW
- 96 Volts – 10 KW
- 144 Volts – 15 KW

How does It Work?

NUKI uses a patented 'Entrapper' technology to harvest passive energy from the environment, converting it into a sustainable power source. This energy is abundant and available 24/7, ensuring consistent, reliable performance.

NUKI redefines what's possible, turning the laws of conventional energy upside down.
